### Statistical Analysis

#### Regression

- Lottery, name, and school removed
- Missing values removed
- Regression models run with all variables
- Adjusted R2 and RMSE compared
- Optimal model selected
- Best subset selection to determine most significant variables
- Interaction terms added to improve accuracy

#### Classification

- Lottery, name, and school removed
- Missing values removed
- Lottery converted to factor because of data size
- Random grid search
- Optimal model determined via accuracy and sd comparison
- Features extracted
- Prospects predicted

### Regression Model Comparison:

## Conclusions

1. Basketball statistics can accurately predict whether a player will be in the lottery
2. Games started, two point percentage, number of games are most important in lottery prediction
3. Basketball statistics cannot accurately predict draft pick order

## Future Directions

1. Assess NBA performance post-draft
2. Collect additional demographic information
3. Evaluate prospect predictions to actuals
4. Segment analysis by position
