

NBA Draft Prediction

Leveraging college basketball statistics to predict the NBA draft pick Authors: Kajal Tiwary, Austin Eaton, Jackson Piccione, Abby Fremaux

GEORGETOWN UNIVERSITY

Introduction

Problem to Address

How to predict NBA draft selections using college basketball player statistics

Importance

Teams can develop more comprehensive strategies to acquire the best talent

Background

What: Selection of players to join the NBA When: Annually every summer (June) Who: Individuals 19 or older

How: Teams with worse records select first **Where:** Changes year to year

Methods

Exploratory Analysis

Understand the Landscape

- Top Schoools
- -Draft pick correlation with key statistics
- Key statistic distributions by lottery type

Classification

Predict the Lottery Selection

- LDA
- QDA
- Logistic
- Random Forest
- Adaptive Boosting
- Bagging
- Gradient Boosting

Regression

Predict the Draft Pick Order

- Linear
- Polynomial
- Random Forest
- Lasso
- Ridge

Statistical Analysis Summary:

Regression

- Lottery, name, and school removed to avoid multicollinearity
- Missing values removed
- Regression models run with all variables
- Adjusted R2 and RMSE compared
- Optimal model selected
- Best subset selection to determine most important variables
- Interaction terms added to improve accuracy

Classifcation

- Lottery, name, and school removed to avoid multicollinearity
- Missing values removed
- Lottery converted to factor
- 5-fold cross validation because of data size
- Random grid search
- Hyperparameter tuning

Conclusions

- 1. Basketball statistics can accurately predict whether a player will be in the lottery
- 2. Games started, two point percentage, number of games are most important in lottery prediction
- 3. Basketball statistics cannot accurately predict draft pick order

Limitations and Future Considerations

- 1. Assess NBA performance post-draft
- 2. Collect additional demographic information
- 3. Evaluate prospect predictions to actuals
- 4. Segment analysis by position
